### Task Completed:

This week, I worked on finalizing the visual analysis from the EDA part and helped integrate it in our project documentation. I also took part in reviewing and updating the SRS based on the supervisor's feedback to make sure our system goals, user requirements and functional modules were clearly defined.

### Task Planned:

Next week, I plan to assist in forming and refining the model requirements, including deciding which algorithms and frameworks will best suit our application. I will also set up the backend structure to integrate the trained models later and ensure smooth connectivity with the interface.
